A message from GAMBICA

Steve Brambley

Director of Public Affairs
GAMBICA

GAMBICA is delighted to be a supporter of the Smart Factory Expo event, a great opportunity to explore, demonstrate and discuss the future of manufacturing. As the voice of the automation and control industry, we promote the concept of smart manufacturing as the next industrial revolution, enabled by a technology evolution. This exhibition is the perfect place to bring together the manufacturing community with the automation and technology industries to define just what the smart factory looks like. That is why we decided to host a GAMBICA pavilion where members can demonstrate the technology solutions to tomorrow's factories needs. By exhibiting together at the pavilion, members not only create a strong industry message, but benefit from a **15% discount on stand space**. I hope you will join us to show how our industry can enable the factory of the future.

What is TM Smart Factory Expo?

The smart factory is no longer the 'factory of the future' – it is the factory of TODAY.

Defects, downtime, unnecessary delays and waste are going to be a thing of the past.

Forward thinking business leaders in manufacturing are now using IT and data in conjunction with production and manufacturing process, more effectively than ever before. In turn ensuring cost effective, timely and sustainable delivery which is essential to businesses to compete on a global scale and drive growth.

TM Smart Factory Expo is the UK's only platform specifically bringing together key solution/product providers and manufacturers, who realise how imperative it is to adopt new technologies and processes in order to sustain and grow market share.

Why are we doing it?

The manufacturing industry is changing and transforming rapidly and the 4th industrial revolution (industry 4.0) is here.

The Manufacturer's Industry 4.0 Readiness Report, highlighted that 69% of respondents thought Industry 4.0 was going to have a significant impact on their business. If companies don't adapt and embrace developing and new technologies now then they run the risk of losing ground to the rest of the world.

The advent and progression of new embedded technology; the industrial internet of things (IIOT), additive manufacturing, servitization, artificial intelligence, automation/robotics and machine to machine (M2M) all mean the manufacturer of today will look very different tomorrow.

By producing TM Smart Factory Expo, The Manufacturer is recognising the changing face of the manufacturing world and giving businesses the opportunity to embrace the future by making working partnerships today.

Benefits of exhibiting

TM Smart Factory Expo the only showcase event to focus solely on the very latest advances in smart manufacturing in the UK. This annual exhibition brings together all the best innovations, latest developments and vital information to enable UK manufacturers to adopt new technologies and processes to their businesses to compete and grow in an ever competitive global market.

By exhibiting at the event you will expose your company to key decision makers with real purchasing power who are looking to meet new suppliers, source new products and services, network and form long term business connections.

EXCLUSIVE
